

TRAD SAFETY DECK

A lightweight fall prevention platform, which is a cost effective alternative to a birdcage scaffold. Capable of taking a 2kN/m² load, the TRAD DECK has variable platform heights between 1.5m and 3.0m, while two operatives can install 80m² per hour.

A new and innovative hybrid version is now available, allowing the use of scaffold tube or system scaffold to be used as the supporting legs, in place of the traditional plastic. This allows for a fully free-standing solution.

Quick and easy to install by any trained and competent person.

ALL-IN-ONE EDGEGUARD

Available in both permanent and temporary variants, the TRAD ALL-IN-ONE EDGEGUARD system is a simple, effective and market leading counterweighted double guardrail system, designed for flat roofs of all types to a pitch of 10° for temporary use and 5° for permanent use.

TRAD ALL-IN-ONE EDGEGUARD is compliant to BS EN 13374 Class A for temporary use and BS 13700 for permanent use.

TRADGUARD MESH BARRIER

The TRADGUARD mesh barrier system is a highly versatile proprietary edge protection solution which is fully compliant to BS EN 13374 Class A. The system is suitable for nearly all types of construction; including reinforced concrete, structural steel, timber frame and civil engineering applications. Since the system's launch in 2014 it has been utilised on a number of high profile projects across various sectors.

The TRADGUARD system can be attached to any suitable base material by a range of attachment components. It is suitable for concrete, structural steel, timber frame and pre-cast, while also being suitable for edge protection on the TRAD Safety Deck Hybrid free-standing solution.

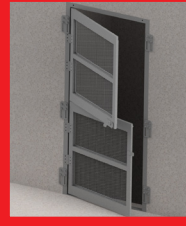

TRAD LIFT SHAFT GATES

The ultimate safety solution for arguably the most dangerous area on building sites – lift shafts. TRAD's Lift Shaft Gate provides edge protection for operatives whilst affording protection against falling objects.

The unique aluminium design, ensures that the gate can be easily installed by just two operatives working within the manual handling regulations.

The gate is designed to protect standard lift shaft openings of 1.0m to 1.2m, however, for larger lift shaft openings a variety of different sized panels can be fitted to the sides to increase coverage.

TRAD CATCH FAN

The TRAD Catch Fan is capable of providing a smart, effective containment solution for all high rise building projects, regardless of shape or size. It gives reliable protection for personnel working below, by safeguarding against falling objects, while also having person catching capabilities for those working above.

With a double layer of net made up of a 60mm x 60mm and a 20mm x 20mm overlay, the TRAD Catch Fan is manufactured to meet all requirements of BS EN 1263-1; and with standard sizes of 6m and 4m, which project a 3m distance, gives all the protection required.

TRAD MINI-CATCH FAN

The TRAD Mini Catch Fan is a new innovation from TRAD UK. This unique system has been specifically designed with the scaffolding sector in mind. The TRAD Mini Catch Fan offers significantly increased protection when it comes to the containment of falling objects over that of a traditional boarded fan during the erection and dismantling of a scaffold.

Although the TRAD Mini Catch Fan sits outside of the scope of BS EN 12811-4, it has been rigorously tested using the principles set out in the standard, with the designed use of the product taken into account during the process. It is also not designed to catch persons falling from height and is outside of the scope of BS EN 1263.

TRADITIONAL SCAFFOLDING

TRAD UK provide a full range of scaffold tube, fittings and boards which conform to all relevant British and European Standards; such as BS EN 39, BS EN 10219-1, BS EN 74, BS 1139 and BS 2482.

ALTRIX TEMPORARY ROOF

ALTRIX is an all-aluminium modular temporary roofing and weather protection system, which utilises the slide sheet keder model. This allows the roof sheets to be installed from the supporting structure below, in complete safety. Using the proven sliding button system to retain the sheet tracking, ALTRIX uses a heavy-duty 790mm deep structural beam ideal for demanding usage.

ALTRIX is more than just a roof. The chords and vertical posts of the beams are manufactured from 48.3mm diameter alloy tube. Because they do not require special fittings, they are suitable for use in many normal scaffold applications, such as bridge sections.

TEMPORARY ACCESS STAIRS

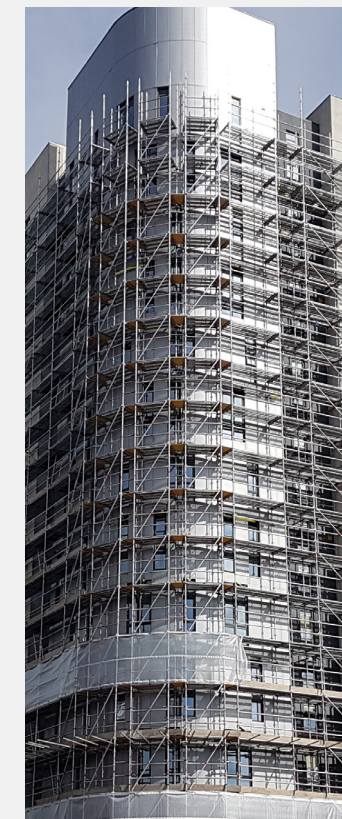

TRAD UK offers a range of temporary stair solutions tailored to diverse needs. Our offerings include the versatile TRAD Stair System, a modular multi-level scaffolding access solution. Additionally, we provide the TRAD Internal Stair Unit, designed for seamless use within a building, facilitating efficient access between floors during construction. For the fast-paced environments of building sites and civil projects, we also offer the TRAD Site Stairway – a quick and easy-to-install access solution that enhances accessibility and safety on-site.

PLETTAC METRIX

PLETTAC METRIX® is an award winning, modern and revolutionary rosette system, where the sizes of horizontal members are divisible by a combination of other sizes. This has the advantage of allowing extra verticals within the bay length or breadth, by using smaller horizontals on one side.

Exceptionally quick and easy to install by trained and competent ring system scaffolders.

HIRE & SALE SOLUTIONS FROM TRAD UK

As an industry-leading provider for scaffolding and construction safety products, our innovative range and our dedication to efficiency and safety is only matched by the highest levels of service, delivered by our experienced team and nationwide support network of depots, we make it easier than ever to find the right solution for your project.

Industry leading products include:

- ✔ TRAD Safety Deck
- ✔ ALTRIX Roof System
- ✔ Catch Fan
- ✔ PLETTAC METRIX
- ✔ Lift Shaft Gate
- ✔ All-In-One EdgeGuard
- ✔ Mini Catch Fan
- ✔ TRADLOK
- ✔ Scaffold Boards
- ✔ Scaffold Tube
- ✔ TRADGUARD
- ✔ Loading Hatch
- ✔ Alloy Beams
- ✔ Scaffold Fittings
- ✔ Horizontal Lifeline Systems
- ✔ Roof Walkway Systems
- ✔ Site Stairwar Access Systems
- ✔ TRADSTAIR

TRAD UK provides nationwide solutions from six strategically placed support depots.

GLASGOW | LEEDS | MANCHESTER | BIRMINGHAM | LONDON | ANDOVER

TRAD UK's NASC Approved Products Include:

- ✔ EN 74-1 Scaffold Couplers
- ✔ EN 39 Type 4 Scaffold Tube
- ✔ EN 10219 3.2mm Scaffold Tube
- ✔ PLETTAC METRIX System Scaffold
- ✔ TRADLOK System Scaffold
- ✔ TRADSTAIR
- ✔ BS 2482 Scaffold Boards
- ✔ TG 20 Prefabricated Structural Transoms
- ✔ Aluminium Beams, which include TRAD 450, TRAD 750, Asterix HD, Asterix 750, Altrix, DESSA S45, Apollo 450 and Apollo X-Beam

TRAD UK is a business name of TRAD Hire & Sales Limited;
Registered Office: Albion Road, Dartford, Kent, DA1 5PZ.
Registered in England No. 3491083
