ALLOY SCAFFOLD BEAMS

Lightweight strength for demanding scaffold builds.

Alloy Scaffold Beams are prefabricated, high-strength components designed for a wide range of specialist scaffolding applications. Lighter and easier to handle than steel beams, they reduce manual handling strain without compromising performance. As aluminium is less stiff than steel, correct beam selection is essential to ensure the required load capacity. They are ideal for:

- Forming bridges within scaffold structures
- Creating suspended platforms
- Erecting temporary roofs
- Cantilever scaffolds
- Strengthening scaffold platforms

COMPONENTS AVAILABLE

- ✓ TRAD 750mm Alloy Beam
- ✓ Alloy Beam 450mm S45
- ✓ TRAD Alloy Beam 450mm
- ✓ Alloy X-Beam
- ✓ Asterix HD Alloy Beam
- ✓ Altrix Alloy Beams
- ✓ Asterix HD Beam Spigots
- ✓ ALTRIX Beam Spigots
- ✓ Alloy Beam Spigots
- ✓ Altrix Quick Release Pins
