

SCAFFOLDING ANCILLARY SERVICE OF THE YEAR AWARD

NAME OF COMPANY:	Domino Clamps
COMPANY WEBSITE:	www.dominoclamps.com
1.	What services/products does your company provide? <i>(Please use bullet points if more than one).</i>
	<p>Domino Clamps are a reusable attachment point for shipping containers which allow you to attach scaffold tube quickly and easily to a shipping container without damaging the container.</p>
2.	What benefit do these services/products provide to scaffolding contractors?
	<p>The Domino Clamps lock into the corner castings of all ISO shipping containers leaving a solid metal plate with four M12 female threads ready to attach your scaffold tube. Both half couplers and kee clamp style fittings can then be bolted directly to the Domino using M12 set screws allowing scaffold tube to be attached both vertically and horizontally and providing a reliable anchor with up to 2000kg working load.</p> <p>For attaching scaffolding we offer four tube clamp options on our website that, when used in conjunction with Domino Clamps, allow you to attach a scaffold tube vertically, horizontally (along the side of the container) and horizontally (Perpendicular) to the container.</p> <p>Domino Clamps can be used for a variety of purposes, including securing a structure to a neighbouring shipping container for support, assisting in the construction of a second-tier structure or railing around a shipping container, or attaching advertising banners. We also offer kits designed specifically for mounting security equipment, such as CCTV and floodlights, to keep your site safe and secure.</p> <p>Since Domino Clamps attach to the ISO corner castings of shipping containers, they will also work with some welfare units, containerised site offices and generators.</p>
3.	Why do you feel the services/products that your company provides should receive special recognition from NASC members?
	<p>Domino Clamps provides a quick, safe and easy method to attach scaffolding to a shipping container and can be reused over again on future projects.</p> <p>And it's not just scaffolding, the Domino Clamp enables almost anything to be attached to shipping containers without the need to weld or drill the container. This means anyone can use it and they don't cause any damage to the container.</p> <p>They can be an invaluable tool for NASC members.</p>
